ART UNIT

PAPER NUMBER

2622

MAIL DATE

DELIVERY MODE

09/19/2008

PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b> 10/605,172	<b>Applicant(s)</b> WAKEFIELD, IVAN N.	
	<b>Examiner</b> TUAN H. LE	<b>Art Unit</b> 2622	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 18 June 2008.
- 2a) ☒ This action is **FINAL**.                      2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-3,5,7-25,32-42 and 48-54 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-3,5,7-25,32-42 and 48-54 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## DETAILED ACTION

### *Response to Arguments*

Applicant's arguments filed 6/18/08 have been fully considered but they are not persuasive.

Regarding **claims 1, 17, 32, and 48**, the applicant submits that Dutta (US 2003/0076408) and Rhoads et al (US 2002/0062382) do not disclose every element and associated function of the device for communication. However, the examiner respectfully disagrees.

Specifically, Dutta discloses identifying a plurality of possible classes of data in the image (Dutta U.S 2003/0076408, paragraph [0023] lines 38-46, wherein after an image is taken and stored, a reconstructed image of the captured and stored image is generated and a processor needs to identify the reconstructed image in order to store it to a corresponding database, such as list of telephone numbers, internet address, email addresses, names, etc.), the processor identifying a class of data in the image of the plurality of classes of data (telephone number or internet address) and performing a predetermined function (initiate a telephone call or browse the internet) associated with the class of data in response to the class of data being identified in the image, each of the plurality of possible classes of data having an associated predetermined function (telephone number for making a telephone call or internet address for browsing the internet). In addition, Dutta discloses that the plurality of possible classes of data comprises data visible to human eye (telephone numbers or internet address) and data unintelligible to human eye (Dutta, Fig. 3 and paragraph [0025], wherein the object for

Art Unit: 2622

the camera module can be text or bar code). Additionally, Rhoads discloses at least one of subliminal data, data formed using steganography, or watermarking (Rhoads, Abstract, Fig. 1, and paragraph [0033] and paragraph [0022], wherein a user can hold an image containing a collateral data in front of a computer and 101 and the computer 102 will extract the collateral data and direct the computer's browser to a particular website 104). Since the applicant does not specifically define the type of camera, the camera as described by Rhoads meets applicant's claimed feature.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

**Claims 1-3, 5, 7-25, 32-42, and 48-54 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dutta (U.S. Pub. 2003/0076408) in view of Rhoads (U.S. 2002/0062382 to Rhoads et al).**

Regarding **claim 1**, Dutta discloses a device for communication (Dutta, Fig. 1, Fig. 2, and Fig. 3 ), comprising:

- an optical sensor (204) to capture an image; and
- a processor (304), the processor configured to identify a plurality of possible classes of data in the image, the processor identifying a class of data in the image of the plurality of classes of data and performing a predetermined function associated with the class of data in response to the class of data being identified in the image, each of

Art Unit: 2622

the plurality of possible classes of data having an associated predetermined function (Dutta, Fig. 3, paragraph [0023], wherein a captured image is converted into text by an optical character recognition OCR program),

wherein the plurality of possible classes of data comprise data visible to a human eye and data unintelligible to a human eye (Dutta, Fig. 3 and paragraph [0025], wherein the object for the camera module can be text or bar code).

However, Dutta does not disclose at least one of subliminal data, data formed using steganography, or watermarking.

On the other hand, Rhoads discloses at least one of subliminal data, data formed using steganography, or watermarking (Rhoads, Abstract, Fig. 1, and paragraph [0033], wherein a user can hold an image containing a collateral data in front of a computer and 101 and the computer 102 will extract the collateral data and direct the computer's browser to a particular website 104).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to incorporate the collateral information extraction as described by Rhoads into the communication device as described by Dutta in order to access a website because such incorporation allows a user to access the website that is more appropriate for the user at that particular time, (Rhoads, Abstract).

Regarding **claim 2**, Dutta and Rhoads disclose the device of claim 1. In addition, Dutta discloses the optical sensor comprises one of a charge coupled device, a complimentary metal oxide semiconductor (CMOS) and a camera (Dutta, Fig. 3 and paragraph [0018]).

Regarding **claim 3**, Dutta and Rhoads disclose the device of claim 1. In addition, Dutta discloses a data structure including computer-executable instructions executable by one of the optical sensor and the processor to decode pixels in the image to identify or select the class of data (Dutta, Fig. 3 wherein software 318 includes a data structure).

Regarding **claim 5**, Dutta and Rhoads disclose the device of claim 1. In addition, Dutta discloses a display (104) to display at least one of the image and the class of data (Dutta, Fig. 1 and paragraph [0015]).

Regarding **claim 7**, Dutta and Rhoads disclose the device of claim 1. In addition, Dutta discloses the plurality of possible classes of data comprise at least one of a phone number, a list of phone numbers, a bar code, access information to a web site, a sequence of commands, and information associated with a product or service (Dutta, paragraphs [0023] and [0025], wherein bar code, text, web address, phone number are disclosed and accessed).

Regarding **claim 8**, Dutta and Rhoads disclose the device of claim 7. In addition, Dutta discloses the sequence of commands comprises commands to be performed automatically by a communication device (Dutta, Fig. 1 and paragraph [0023], wherein the mobile phone automatically can initiates a call given a decoded phone number).

Regarding **claim 9**, Dutta and Rhoads disclose the device of claim 8. In addition, Dutta discloses the communication device comprises a cellular telephone (Dutta, Fig. 1).

Regarding **claim 10**, Dutta and Rhoads disclose the device of claim 7. In addition, Dutta discloses the sequence of commands comprises commands to be

Art Unit: 2622

performed by a communication device in response to a password (Dutta, paragraph [0023], wherein sending an requires an password).

Regarding **claim 11**, Dutta and Rhoads disclose the device of claim 10. In addition, Dutta discloses the communication device comprises a cellular telephone (Dutta, Fig. 1).

Regarding **claim 12**, Dutta and Rhoads disclose the device of claim 10. In addition, Dutta discloses at least one of a user interface and a voice recognition function to enter the password (Dutta, Fig. 1 and paragraph [0015], wherein keyboard 112 is used).

Regarding **claim 13**, Dutta and Rhoads disclose the device of claim 1. In addition, Dutta discloses the optical sensor (204) is operable to capture the image from one of a television, a video monitor, and a fixed medium (Dutta, abstract, wherein an object is in low light condition).

Regarding **claim 14**, Dutta and Rhoads disclose the device of claim 1. In addition, Dutta discloses the predetermined function comprises at least one of transmitting a signal to order a product or service, decoding data from one or more images to reprogram a communication device, downloading communication device setup parameters, storing one or more phone numbers, establishing a call, storing information associated with a web site or email address, accessing a web site, and sending an email message (Dutta, paragraph [0023]).

Regarding **claim 15**, Dutta and Rhoads disclose the device of claim 14. In addition, Dutta discloses transmitting a signal to order a product or service comprises

Art Unit: 2622

sending one of a short message service (SMS) message, email message, or voice or data message, each including information associated with a purchaser (Dutta, paragraph [0023], a mobile phone is associated with at least one user).

Regarding **claim 16**, Dutta and Rhoads disclose the device of claim 14. In addition, Dutta discloses a user interface (112) to at least one of select the class of data from the image, edit the class of data, store the class data and transmit the class of data (Dutta, Fig. 1 and paragraphs [0015] and [0023], wherein information of the captured image is sent from the mobile phone).

Regarding **claim 17**, Dutta discloses a device for communication (Dutta, Fig. 1, Fig. 2, and Fig. 3 ), comprising:

- an optical sensor (204) to capture an image;

- a processor (304), wherein a data structure operable in association with one of the optical sensor, the processor and a mobile system includes computer-executable instructions capable of identifying a plurality of possible classes of data in the image, the computer-executable instructions identifying a class of data in the image of the plurality of possible classes of data (Dutta, Fig. 3, paragraph [0022], wherein software 318 is used for processing capture image);

- another data structure operable in association with the processor (304) to perform a predetermined function associated with the class of data in response to the class of data being identified in the image, each of the plurality of possible classes of data having an associated predetermined function (Dutta, Fig. 3, paragraph [0023],

Art Unit: 2622

wherein for corresponding identified data, the device initiates a telephone call, browses internet, and sends e-mail message); and

a transmitter (106) to transmit signals in response to the class of data (Dutta, Fig. 1, paragraph [0015], wherein transmission of data is performed),

wherein the plurality of possible classes of data comprise data visible to a human eye and data unintelligible to a human eye (Dutta, Fig. 3 and paragraph [0025], wherein the object for the camera module can be text or bar code).

However, Dutta does not disclose at least one of subliminal data, data formed using steganography, or watermarking.

On the other hand, Rhoads discloses at least one of subliminal data, data formed using steganography, or watermarking (Rhoads, Abstract, Fig. 1, and paragraph [0033], wherein a user can hold an image containing a collateral data in front of a computer and 101 and the computer 102 will extract the collateral data and direct the computer's browser to a particular website 104).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to incorporate the collateral information extraction as described by Rhoads into the communication device as described by Dutta in order to access a website because such incorporation allows a user to access the website that is more appropriate for the user at that particular time, (Rhoads, Abstract).

Regarding **claim 18**, Dutta and Rhoads disclose the device of claim 17. In addition, Dutta discloses the data structure operable in association with one of the optical sensor, the processor and the mobile system includes computer-executable

Art Unit: 2622

instructions executable by one of the optical sensor, the processor and the mobile system to decode pixels in the image to identify or select the class of data (Dutta, Fig. 3, paragraph [0022], wherein software 318 is used for processing capture image and includes a data structure).

Regarding **claim 19**, Dutta and Rhoads disclose the device of claim 17. In addition, Dutta discloses a storage device (306) to store at least one of the image and the class of data (Dutta, Fig. 3).

Regarding **claim 20**, Dutta and Rhoads disclose the device of claim 17. In addition, Dutta discloses a display (104) to display at least one of the image and the class of data (Dutta, Fig. 1 and paragraph [0015]).

Regarding **claim 21**, Dutta and Rhoads disclose the device of claim 20. In addition, Dutta discloses at least one function button to select the class of data from the image (Dutta, Fig. 1 and paragraph [0015], wherein keyboard 112 is used).

Regarding **claim 22**, Dutta and Rhoads disclose the device of claim 21. In addition, Dutta discloses a pointing device to select the class data from the image (Dutta, Fig. 1 and paragraph [0015], wherein inherent part of keyboard 112 is used).

Regarding **claim 23**, Dutta and Rhoads disclose the device of claim 17. In addition, Dutta discloses a user interface to at least one of select the class data from the image, edit the class of data, store the class of data and transmit the class of data (Dutta, Fig. 1 and paragraph [0015], wherein keyboard 112 is used).

Regarding **claim 24**, Dutta and Rhoads disclose the device of claim 17. In addition, Dutta discloses the class of data comprises at least one of a phone number, a

Art Unit: 2622

list of phone numbers, access information to a web site, a sequence of commands, and information associated with a product or service (Dutta, paragraph [0023]).

Regarding **claim 25**, Dutta and Rhoads disclose the device of claim 17. In addition, Dutta discloses the predetermined function comprises one of transmitting a signal to order a product or service, decoding data from one or more images to reprogram a communication device, downloading communication device setup parameters, storing one or more phone numbers, establishing communications, storing information associated with a web site or email address, accessing a web site, and sending an email message (Dutta, paragraph [0023]).

Regarding **claim 32**, the same ground of rejection as in claim 1 is applied.

Regarding **claim 33**, Dutta and Rhoads disclose the device of claim 32. In addition, Dutta discloses decoding pixels in the image to identify or select the class of data (Dutta, paragraph [0023], wherein OCR program is used).

Regarding **claim 34**, same ground of rejection as in claim 5 is applied.

Regarding **claim 35**, same ground of rejection as in claim 7 is applied.

Regarding **claim 36**, same ground of rejection as in claim 8 is applied.

Regarding **claim 37**, same ground of rejection as in claim 10 is applied.

Regarding **claim 38**, same ground of rejection as in claim 12 is applied.

Regarding **claim 39**, same ground of rejection as in claim 14 is applied.

Regarding **claim 40**, same ground of rejection as in claim 15 is applied.

Regarding **claim 41**, Dutta and Rhoads disclose the method of claim 39. In addition, Dutta discloses retrieving purchaser information from a data source in

Art Unit: 2622

response to transmitting a signal to order a product or service, (Dutta, paragraph [0023], wherein the mobile phone is associated with at least one user).

Regarding **claim 42**, same ground of rejection as in claim 16 is applied.

Regarding **claim 48**, the same ground of rejection as in claim 17 is applied.

Regarding **claim 49**, Dutta and Rhoads disclose the computer readable-medium of claim 48. In addition, Dutta discloses decoding pixels in the image to identify or select the class of data (Dutta, Fig. 3, paragraphs [0022] and [0023], wherein OCR program is used).

Regarding **claim 50**, the same ground of rejection as in claim 24 is applied.

Regarding **claim 51**, the same ground of rejection as in claim 18 is applied.

Regarding **claim 52**, Dutta and Rhoads disclose the computer readable-medium of claim 50. In addition, Dutta discloses performing the sequence of commands in response to a password (Dutta, paragraph [0023] wherein a password is associated with at least the email-message).

Regarding **claim 53**, the same ground of rejection as in claim 25 is applied.

Regarding **claim 54**, Dutta and Rhoads disclose the computer readable-medium of claim 53. In addition, Dutta discloses transmitting a signal to order a product or service comprises sending one of a short message service (SMS) message, an email message, or a voice or data message, each including information associated with a purchaser, (Dutta, paragraph [0023], wherein information of a user is associated with the mobile phone).

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to TUAN H. LE whose telephone number is (571)270-1130. The examiner can normally be reached on M-Th 7:30-5:00 F 7:30-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David L. Ometz can be reached on (571) 272-7593. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
